Dear Hiring Manager,

I am writing to express my enthusiasm for the Software Engineer role at Google. As a pre-final year Computer Science student at KIET Group of Institutions, I have cultivated a strong foundation in software development, data structures, and algorithms. I am proficient in C++, Python, Java, and SQL, and I am deeply passionate about designing scalable and impactful technological solutions.

My academic journey and project experience reflect a commitment to solving real-world problems through technology. One of my key initiatives, Kavach – a Women Safety Tag Solution, leverages IoT and real-time alert systems to enable rapid emergency response. In another project, I integrated software and hardware systems for a Coal Weighing System for Railway Wagons, enhancing monitoring accuracy through IoT-based automation.

In addition to my technical skills, I bring leadership and teamwork experience. As the Social Media Manager and Coordinator of INNOTECH 23, I led a 10-member team to boost event outreach and engagement. I take pride in combining creativity with technical acumen to drive meaningful results.

I am particularly drawn to Google's culture of innovation, openness, and impact. The opportunity to work alongside some of the brightest minds in tech and contribute to products that scale globally aligns perfectly with my aspirations. I am excited by Google's use of AI, cloud computing, and open-source technologies, and I am eager to contribute my skills toward building intuitive and robust solutions.

Thank you for considering my application. I would welcome the chance to further discuss how my background and passion align with Google's mission.

Sincerely,

Krishna Kumar Chaudhary
